chargelT mobility extends charging network

More charging comfort for drivers of electric cars thanks to an extended charging network. With the connection to GIREVE chargelT mobility offers an additional service for the users of the charging stations in Germany and abroad.

Kitzingen/Paris: With the connection to GIREVE, a French interoperability platform, chargelT mobility extends the access possibilities to their charging stations. GIREVE acts as an intermediary service between the charging station operator (CPO) and the e-mobility provider (EMP), enabling roaming, for example. With this step chargelT mobility further expands its own store network, which already includes e-clearing and interchange from Hubject. The chargelT charging network thus grows by the EMPs and charging points bundled by GIREVE, currently around 40 EMPs and over 78,000 charging points. The roaming services of GIREVE, hubject (intercharge) and e-clearing can be used at all online charging points of chargelT.

More comfort for e-mobilists

For e-car drivers, this service further enhances the simple and uncomplicated charging process and simplifies the cross-border charging process. This technical solution represents the interface between the charging infrastructure operators and the EMPs and thus offers users access to a large number of charging points.

To chargelT's viewpoint, EV drivers should be able to charge their EVs everywhere, easily and reliably, from 100% renewable energies. To make it possible, chargelT deals with all stakeholders and connects these worlds. The operator's connection to GIREVE's roaming platform follows this objective. Any eMSP can now partner with chargelT through GIREVE and give their EV drivers access to chargelT's network.

About Gireve:

To support the rapid growth of electric mobility, GIREVE brings industry operators together: charging point operators, car manufacturers, energy suppliers, public institutions... GIREVE is an integrated platform offering innovative services that enable mobility operators to easily build partnerships.

About chargeIT mobility GmbH:

chargeIT mobility GmbH was founded in 2010 and is located in the INNOPARK Kitzingen. chargeIT mobility has been developing intelligent charging solutions for EVs (e-cars, e-busses and e-bikes) since the very beginning of young e-mobility. As an independent IT backend provider chargeIT provides a platform for networked e-mobility and offers fully integrable complete solutions consisting of control electronics (Charging Controller) and cloud solution (Charging Management Portal). Currently more than 3000 chargeIT mobility charging stations are installed in the EU.
